

Abstract

~~The invention relates to a~~ A complex of enzyme, protein and carrier comprising two or more molecules of an enzyme conjugated through an amino group or other group to a carrier such as polylysine, and a protein (for example, antibody) with a specific binding potency to other substance(s) (for example, antigen) conjugated to at least one of said two or more molecules of the enzyme. [[,]] This complex ~~which~~ enables accurate assay of a trace amounts of a substance at a high sensitivity.
